

COURSE OUTLINE

1. GENERAL

SCHOOL	AGRICULTURAL SCIENCES		
ACADEMIC UNIT	AGRICULTURE		
LEVEL OF STUDIES	UNDERGRADUATE		
COURSE CODE	AGR_503	SEMESTER OF STUDIES	5 th
COURSE TITLE	Agricultural And Greenhouse Constructions		
INDEPENDENT TEACHING ACTIVITIES <i>if credits are awarded for separate components of the course, e.g. lectures, laboratory exercises, etc. If the credits are awarded for the whole of the course, give the weekly teaching hours and the total credits</i>	WEEKLY TEACHING HOURS	CREDITS	
Lectures	3	5	
Laboratory course	2		
Total	5		
<i>Add rows if necessary. The organisation of teaching and the teaching methods used are described in detail at (4).</i>			
COURSE TYPE <i>general background, special background, specialised general knowledge, skills development</i>	General background, specialised general knowledge, skills development		
PREREQUISITE COURSES:	There are no prerequisite courses.		
LANGUAGE OF INSTRUCTION and EXAMINATIONS:	Greek. However, teaching can also be in English in the case of foreign students attending the program.		
IS THE COURSE OFFERED TO ERASMUS STUDENTS	Yes		
COURSE WEBPAGE (URL)			

2. LEARNING OUTCOMES

<p>Learning outcomes <i>The course learning outcomes, specific knowledge, skills and competences of an appropriate level, which the students will acquire with the successful completion of the course are described.</i> Consult Appendix A</p> <ul style="list-style-type: none"> • <i>Description of the level of learning outcomes for each qualifications cycle, according to the Qualifications Framework of the European Higher Education Area</i> • <i>Descriptors for Levels 6, 7 & 8 of the European Qualifications Framework for Lifelong Learning and Appendix B</i> • <i>Guidelines for writing Learning Outcomes</i>
<p>The aim of the course is to present, inform and educate students on technologies and techniques related to both agricultural constructions and greenhouses. Particular emphasis is given to understanding all the phenomena taking place in a greenhouse so they can analyze them and be able to choose the necessary equipment to help them achieve the right microclimate conditions inside the greenhouse for optimal qualitative and quantitative production.</p> <p>Students, after completing the course, will be able to:</p> <ul style="list-style-type: none"> - Understand the basic characteristics of solar radiation in relation to the operation of greenhouses - Understand the properties of different flexible and stiff greenhouse cover materials, select the appropriate materials for each crop and type of greenhouse and maintain them in an appropriate way. - Understand the behavior and characteristic properties of greenhouse materials (wood, aluminum, steel) and opt for a combination of criteria relating to functionality, cost, compatibility with cover materials, etc. - Understand and apply greenhouse design criteria for greenhouse type selection, geometric features, structural features and coverage materials, foundation, drainage, placement, taking into account microclimate impacts, functionality, costs, wind pressure and other actions. - Understand the natural phenomena associated with the micro-climate of the greenhouse

- Have knowledge of the basic technologies used in greenhouses
- Have ability to collect and interpret relevant data to shape judgement involving reflection on issues related to farm buildings and greenhouses

General Competences

Taking into consideration the general competences that the degree-holder must acquire (as these appear in the Diploma Supplement and appear below), at which of the following does the course aim?

<i>Search for, analysis and synthesis of data and information, with the use of the necessary technology</i>	<i>Project planning and management</i>
<i>Adapting to new situations</i>	<i>Respect for difference and multiculturalism</i>
<i>Decision-making</i>	<i>Respect for the natural environment</i>
<i>Working independently</i>	<i>Showing social, professional and ethical responsibility and sensitivity to gender issues</i>
<i>Teamwork</i>	<i>Criticism and self-criticism</i>
<i>Working in an international environment</i>	<i>Production of free, creative and inductive thinking</i>
<i>Working in an interdisciplinary environment</i>
<i>Production of new research ideas</i>	<i>Others...</i>

Upon completion of this course, the student will develop the following general competencies (from the list above):

Search for, analysis and synthesis of data and information, with the use of the necessary technology

Decision Making Autonomous Laboratory Work / Teamwork

Design and management of greenhouses and farm units

Promoting free, creative and inductive thinking in choice of systems and materials

3. SYLLABUS

LECTURES

Theoretical part

1. Introduction (historical overview, statistics, greenhouse types, greenhouse crops)
2. Radiation (Generally, electromagnetic radiation, solar radiation spectrum, solar radiation intensity, calculation of incident solar radiation)
3. Solar radiation and plants, factors that favor natural lighting
4. Microclimate - Heat and Humidity
5. Physical and dynamic Ventilation (systems, equipment)
6. Heating (systems, equipment)
7. Cooling, Relative humidity control
8. Energy balance of greenhouses
9. Artificial lighting, CO₂ enrichment, Disinfection
10. Mechanization and Automation (General Introduction)
11. Networks and Their Contribution to Rural Economy
12. Farm buildings (General - Types of farm buildings - Individual buildings - Farmer's residence - Stables of various animals - Cooperative buildings - Buildings of agricultural and craft industries - Buildings of public and social property)
13. Warehouses for agricultural products (General Warehouses - grass Warehouses -fruit Warehouses – Potato warehouses- Silos - Warehouses of Fresh Vegetables - Dryers)

Laboratory part:

1. Design of greenhouse construction (greenhouse design criteria, types of greenhouses and structural features, impact on microclimate, functionality, cost, support of covering materials, foundation, drainage, winding, siting)
2. Greenhouse coverage materials - glass panes (generally for glass, glass panes, glazing types, glazing properties and behavior of glass panes as glasshouse cover materials)
3. Plastics (generally polymer and plastic, flexible plastic sheets and hard plastic surfaces, characteristics, properties and behavior of selected stiff and flexible plastic sheets, effect of additives on polyethylene sheets, coating materials with selected light transmittance)
4. Construction materials (General wood, structural wood as greenhouse material, characteristic properties and behavior of wooden greenhouses, protection.) General aluminum and steel, aluminum and steel as greenhouse materials, characteristic properties and behavior of aluminum greenhouses and steel, protection)
5. Calculation of Thermal Needs of Greenhouses and Agricultural Units
6. Techno-economic feasibility study of a greenhouse business
7. Educational excursions (2)

4. TEACHING AND LEARNING METHODS - EVALUATION

<p style="text-align: center;">DELIVERY <i>Face-to-face, Distance learning, etc.</i></p>	Face to face lectures.	
<p style="text-align: center;">USE OF INFORMATION AND COMMUNICATION TECHNOLOGIES <i>Use of ICT in teaching, laboratory education, communication with students</i></p>	Use of ICT (powerpoint) and panel in teaching. Exemplary solving exercises	
<p style="text-align: center;">TEACHING METHODS <i>The manner and methods of teaching are described in detail.</i></p> <p><i>Lectures, seminars, laboratory practice, fieldwork, study and analysis of bibliography, tutorials, placements, clinical practice, art workshop, interactive teaching, educational visits, project, essay writing, artistic creativity, etc.</i></p> <p><i>The student's study hours for each learning activity are given as well as the hours of non-directed study according to the principles of the ECTS</i></p>	Activity	Semester workload
	Lectures (3 contact hours per week x 13 weeks)	39
	Laboratory exercise, field exercises with resolving representative problems (2 contact hours per week x 6 weeks) and educational visits	12
	Final examination (3 contact hours)	3
	Study hours and preparation for the final exams	71
	Course total	125 hours total workload
<p style="text-align: center;">STUDENT PERFORMANCE EVALUATION <i>Description of the evaluation procedure</i></p> <p><i>Language of evaluation, methods of evaluation, summative or conclusive, multiple choice questionnaires, short-answer questions, open-ended questions, problem solving, written work, essay/report, oral examination, public presentation, laboratory work, clinical examination of patient, art interpretation, other.</i></p> <p><i>Specifically, defined evaluation criteria are given, and if and where they are accessible to students.</i></p>	<ol style="list-style-type: none"> 1. Course attendance - Participation in the classroom 2. Short answer questions 3. Solving laboratory exercises 4. Final written examination of all material to be used for the overall assessment of students in combination with laboratory results. Minimum passing grade: 5. 5. All the above are taking place in the Greek language and for the foreign students (eg ERASMUS students) in English. 	

5. ATTACHED BIBLIOGRAPHY
